The Samson pedestal is an innovative solution where you need an instant support for decking to roof top decking's, above ground raised pools, terraces, balconies and low maintenance decking surfaces.

Teckwood's high quality reliable adjustable decking pedestals have been designed to support all conventional decking systems. The impressive height range, 18 to 140mm makes them suitable for areas with problematic height restrictions or areas where a greater height build up is required. The telescopic stem can be adjusted by the millimetre to achieve the perfect height. The expertly manufactured cradles and pedestals have been designed to improve the performance of your decking by allowing proper drainage and ventilation extending the lifespan of your low maintenance composite decking.

Built to last the independently tested recycled plastic decking support pedestals are very quick and effortless to install and are the perfect choice for any residential or commercial application.
